Sequences AAU29024-AAU29128 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal cand a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contracted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, ung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -

psoriasis, systemic lupus erythematosus, inflammatory bowel disease, periodontitis); wound healing, burns, ulcers, inclisions and cancer. IRR is also useful for proliferation of neural cells and nerve regeneration, for treating peripheral nervous system diseases, central nervous system diseases, Huntington's disease, amyotrophic lateral sclerosis and Shy-brager syndrome); mechanical and traumatic disorders (spinal cord disorders, head trauma cerebrovascular diseases (stroke); HTV, lung or liver fibrosis, irritation associated with infection (septic shock, sepsis or systemic inflammatory response syndrome (SIRS)), ischaemia-reperfusion injury, endotoxin lethality, arthritis, complement, mediated hyperaute rejection, endotoxin lethality, arthritis, complement, mediated hyperaute rejection,

immunological disorders (rheumatoid arthritis, multiple sclerosis,

with

nephritis, cytokine or chemokine-induced lung injury, Crohn's disease, anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammation associated wit pulmonary disease, other autoimmune diseases or inflammatory diseases.

Sequence

```
The present sequence is human leucine-rich repeat (LRR) protein.

LRR protein is involved in protein recognition, cell adhesion, development, signal transduction, DNA repair, recombination, immune responses and transcription. LRR DNA and protein are useful for treating, preventing haemophilia, bleeding disorders (Bernard-Soulier syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular diseases, angioplasty-related restenosis, viral infections, melanomas,

The present sequence is human leucine-rich repeat (LRR) protein.

C LRR protein is involved in protein recognition, cell adhesion,
development, signal transduction, DNA repair, recombination, immune
responses and transcription. LRR DNA and protein are useful for treating,
proventing haemophilia, bleeding disorders (Bernard-Soulier syndrome),
myocardial infarction, thrombosis, atherosolerosis, glomerular diseases,
angioplasty-related restenosis, viral infections, melanomas,
immunological disorders (rheumatoid arthritis, multiple sclerosis,
systemic lupus erythematosus, inflammatory bowel disease,
periodontiis); wound healing, burns, ulcers, incisions and cancer.
C LRR is also useful for proliferation of neural cells and nerve
regeneration, for treating peripheral nervous system diseases, central
nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's
disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);
credenotical and traumatic diseases (Spinal cord disorders, head trauma)
cerebrovascular diseases (Stroke); HIV, lung or liver fibrosis,
irritation associated with infection (septic shock, sepsis or systemic
corebrovascular diseases (Stroke); ischaemia-reperfusion injury,
endotoxin lethality, arthritis, complement-mediated hyperacute rejection,
nephritis, cytokine or chemokine-induced lung injury, crohn's disease,
anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock,
champhylaxis, hypersensitivity, acute pancreatic cell damage from diseases.
c pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Liu C;

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

biodiversity

```
The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping are also used in diagnostics as expressed sequence tags of for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human cald sequence data for this patent did not appear in the printed sequence are for this patent did not appear in the printed sequences the invention. Note: The sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length: 11

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                  Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cardiovascular disorder; systemic infection; autoimmune disease; asthma; rhinitis; chronic obstructive pulmonary disease; emphysema; diabetes; inflammatory bowel disease; ulcerative collitis; Crohn's disease; TLR9-A; rheumatoid arthritis; osteoarthritis; psoriasis; Alzheimer's disease; atherosclerosis; Multiple Sclerosis; septic shock syndrome.

  The present sequence represents human Toll-like receptor (TLR9) variant, designated TLR9-A. The Toll-like receptor protein has immunomodulatory activity, and may be used in vaccines. TLR9 is useful to identify a compound which modulates Toll-like receptor activity. Such compounds are useful to treat an inflammatory or cardiovascular disorder, systemic infection or autoimmune disease that is responsive to Toll-like receptor modulation, for example viral, fungal or bacterial infection, asthma. The printis, chronic obstructive pulmonary disease, emphysema, inflammatory bowel disease such as ulcertaive collitis or Crohn's disease, rheumatoid arthritis, osteoarthritis, psorlasis, Alzheimer's disease, atherosclerosis, Multiple Sclerosis, diabetes or septic shock syndrome associated with systemic infection involving gram positive or gram negative bacteria. They may also be used to manufacture medicament for the treatment of an immune or inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; Toll-like receptor; TLR9; vaccine; inflammatory disorder; cardiovascular disorder; systemic infection; autoimmune disease; asthma; rhinitts; chronic obstructive pulmonary disease; emphysema; diabetes; inflammatory bowel disease; ulcerative colitis; Crohn's disease; rheumatoid arthritis; osteoarthritis; psoriasis; Alzheimer's disease; atherosclerosis; Multiple Sclerosis; septic shock syndrome.

```

```
The present sequence represents a human Toll-like receptor polypeptide, designated TLR9. The Toll-like receptor protein has immunomedulatory activity, and may be used in vaccines. TLR9 is useful to identify a compound which modulates Toll-like receptor activity. Such compounds are useful to treat an inflammatory or cardiovascular disorder, systemic infection or autoimmune disease that is responsive to Toll-like receptor modulation, for example viral, fungal or bacterial infection, asthma, thinitis, chronic obstructive pulmonary disease, emphysema, inflammatory bowel disease such as ulcerative colitis or Crohn's disease, rheumatoid arthritis, osteoarthritis, poschasis, Alzheimer's disease, anderome associated with systemic infection involving gram positive or gram negative bacteria. They may also be used to manufacture medicament for the treatment of an immune or inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
                                                                                                                                                                                                                                                                                                                                                                                      An isolated Toll-like receptor polypeptide useful for the treatment or diagnosis of disorders including inflammatory or cardiovascular disorders \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAW86356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length: 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTMR2-10). The present sequence is partial human DTLR7 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) and each of the DTLR proteins. The DTLR proteins can be used to produce the DTLR proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        dermatological; immunosuppressive; antiinflammatory; anti-HIV;

```
The polynucleotide sequences given in AAB64882 to AAB64930 AAB64931 to human secreted proteins given in AAB64882 to AAB64930. AAB64931 to AAB64931 to AAB64931 to AAB64931 to AAB64931 to the man secreted proteins have sequences and proteins howelves to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: and cells the genes are expressed in. Examples of activities include: and timinflammatory; antisclerotic; dermatological; immunosuppressive; antimicrobial; anti-angiogenic; ophthalmological. europprotectant; anticonvulsant; nootropic; antialzheimers; antiparkinsonian; and vulnerary. The polynucleotides and polypeptides can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. Disorders that may be prevented, diagnosed and/or treated by the above methods include immune disorders (e.g. multiple sclerosis, systemic lupus errythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative clisorders (e.g. cancers and Gaucher's disease), cardiovascular diseases (e.g. scimitar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic disorders (e.g. corneal graft necessal and diabetic retinopathy), neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and /or chemotaxis. AAF33204 to AAF33212 and AAB64881 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                   Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2001.DAT:AAU14800

                                          seq_documentation_block:
                                                               ANUATOSS-AAU14973 represent the amino acid sequences of novel bone marrow-derived polypeptides. The proteins may exhibit e.g., cytokine or stem cell growth factor activity and may be useful for re-engineering damaged or diseased tissues, producing large quantities of human cells to treat Parkinson's, Alzheimer's and other neurodegenerative diseases, wound healing, immune system stimulation or suppression, treating autoimmune diseases, and cancer. The corresponding nucleic acid sequences or therapeutic use; as markers for tissues in which the corresponding protein is preferentially expressed; as a molecular weight marker on gels; as chromosome markers or tags; as probes to hybridise and discover novel, related DNA sequences; as a source of information to derive polymerase chain reaction (PCR) primers; for selecting and making configences for attachment to a 'gene chip' or other support; to raise antigen to another immune response.
                                                                             Bone marrow; immunosuppressive; immunostimulant; cytostatic; vulnerary; nootropic; neuroprotective; therapeutic; antigenic; nutritional source; cytokine; stem cell growth factor; tissue regeneration: cancer; Parkinson's disease; Alzheimer's disease; neurodegenerative disorder; wound healing; immune system; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotides encoding bone marrow-derived polypeptides useful for treating, e.g., cancer, autoimmune disease and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zhang J;

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21353-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                  Protein #5026 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Single exon nucleic acid probes for analyzing gene expression in human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-APR-1998
 The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                            Peptide #5178 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAY41768

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAV41685 to AAV41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

```
This is the amino acid sequence of PRO286, a novel human homologue of Drosophila Toll protein, that acts as a pathogen pattern crecognition receptor, sensing the presence of conserved molecular structures present on microcranisms. The sequence was deduced from isolated cDNA clone DNA42663-1154 (ATCC 209386) (see AAX58296).

The invention provides 3 novel cDNA clones that encode novel human Toll polypeptides PRO285 (see AAX05868). It also provides specific antibodies and chimeric and colecules comprising a PRO285, PRO286 or PRO358 polypeptide, or a transmembrane domain-deleted or inactivated variant, fused to a heterologous amino acid sequence, such as an epitope tag or immunoglobulin Fc region. Being homologues of Drosophila Toll protein, the 3 human proteins are likely to be involved in adaptive immunity, particularly inflammation, septic shock, and response to pathogens in diseases aggravated by the immune response, such as diabetes, amyotrophic lateral sclerosis, cancer, rheumatoid arthritis and ulcers. The PRO polypeptides are used to identify cother proteins involved in Toll-mediated signal transduction (e.g. cher proteins involved in Toll-mediated signal transduction (e.g. cher proteins antibodies. Antibodies specific for the PRO polypeptides (or for the known receptor TLR-2) are used to treat septic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human Toll-like receptors that recognize microbial structures
                                                                                                                                                                                                                                                                                                                                                                                         굓

sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides can be used for detecting crivity. The polynucleotides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to Kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78607 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

                                                               The peptide corresponds to residues 81-95 of the N-terminus of gyroalicin, a water sol. proteolytic fragment of GPID alpha. It may be linked to a second peptide from the 45 kD N-terminal tryptic fragment of GPID alpha. The peptide inhibits binding of vWF to GPID. It can be used to inhibit activation, aggregation and/or adhesion of platelets, esp. for inhibition of thrombosis. see also ARR13128-R1318.
                                                                                                                                                                                                                                                                                                                                                                                                 GPIb alpha peptide fragment - inhibits binding of von Willebrand factor to platelet membrane glyco-protein Ib, useful in treating thrombosis.
                                                                                                                                                                                                          Von Willebrand factor; VWF; platelet membrane glycoprotein Ib;
                                                                                                         seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1991.DAT:AAR13130

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzehelmer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the cissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiathmatic; antialregic; antibacterial; antiviral; cantidiamatory; antiphyroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; cootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating madical conditions and diagnosing pathological conditions. Co Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating cor inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ crejection, modulate haemostatic or thrombolytic activity, modulate and inflammation, cancers, cardiovascular disorders, neurological disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; cancer associated gene; cancer antigen; detection; cancer; diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antifidabetic; antiarthritic; antiarthritic; antiarthritic; antiarthritic; antiarthritic; antidantial ending antidal matery; antithyroid; antialleratic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; cagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; hamatopietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; hamostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acids comprising sequences encoding peptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29 - JUN - 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .8-JUN-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8-JUN-8
                                                                                                                                               AAY94898 to AAA94980, isolated from human adult brain, adult thyroid, adult pretina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult placenta, adult testis, whole embryo, adult cartilage, kidney, adult placenta, adult testis, whole embryo, adult cartilage, kidney, coral brain, adult thymus, foetal placenta, adult cartilage, kidney, adult placenta, adult thymus, foetal placenta, adult cartilage, kidney, coral brain, adult thymus, foetal placenta, adult cartilage, kidney, coral adult bladder, cDNA libraries. The polynuclectides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans core and animals. The polynuclectides can be used as markers in continuous and as curomosome markers on Southern gels, and as chromosome markers or to map gene postitions. The proteins can be used in the cromosomes or to map gene postitions. The proteins can be used in the crommunedeficiency (SCID), as well as viral, bacterial, fungal and other infections in the proteins as necessary in memodeficiency virus (HIV), chepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such candidiasis. The proteins can be used to treat autoimmune pulmonary inflammation, cullinan-Barre syndrome, autoimmune thyroiditis, insulin dependent continuous inflammatory eye disease. The proteins can also be used to treat allergic conditions, such asthma. AAA16698 to AAA16774 represent cycy probes for the human secreted proteins from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2000.DAT:AAG24828

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Active fragments of decorin (full-length coding sequence AAO50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        activity
    The polynucleotide sequences given in AAF33213 to AAF33261 encode the human secreted proteins given in AAB64882 to AAB64930. AAB64931 to AAB64931 represent human secreted polypeptide sequences and proteins conditions. Human secreted proteins have activities based on the tissues cand cella the genes are expressed in the exemplification of the present inwention. Human secreted proteins have activities based on the tissues cand cella the genes are expressed in the reamples of activities include: Immunomodulacory; antisclerotic; dermatological; immunosuppressive; antinflammatory; anti-HIV; immunostimulant; cytostatic; cardiant; cardiant; antimulariz antimucroblal; anti-anglogenic; ophthalmological; meuroprotectant; anticonvulsant; noctropic; antialzheimers; antimucroblan; and vulnerary. The polyvuclectides and polypeptide captered in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. Disorders that may be prevented, diagnosed and/or treated by the above methods include immune disorders (e.g. cancers and Gaucher's disease), hyperproliferative disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases arteriosclerosis), anglogenic disorders (e.g. corneal graft neovasculariation and diabett rethopathy, neurological disorders (e.g. chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and corners are concerned by the above method and parkinson of the present invention.
                                                                                                                                                                                                                                                                                                         Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               leucine-rich repeat; proteoglycan; cell regulatory factor; MBP;

The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such
                                                                                                              leucine-rich repeat; proteoglycan; cell regulatory factor; MBP; fusion protein; maltose binding protein; tumour growth; inhibition; decorin; PG-II; PG-40; transforming growth factor-beta; TGF-beta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          45 kDa amino terminal tryptic fragment of glycocalicin and derivs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Active fragments of protein esp. decorin - with cell regulatory factor domain, useful for inhibiting cell regulatory factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1989.DAT:AAP91368

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAP91368;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 agent
creat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate expression of secreted proteins. (I) and complementary sequences may also be used as DNA probes in diagnositic assays (e.g. polymerase chain reactions (PCR) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may be in meed of restorative therapy. (II) may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of the secreted of production and activity of (II). The anti-(II) antibodies may also be used to down regulate expression and activity of (II). The anti-(II) antibodies may also be used as alignostic agents for detecting the presence of (II) in samples (e.g. by enzyme linked immune/autoimmune diseases (e.g. HIV) (human immunodeficiency virus) infections, anemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative discorders (e.g. malanomas, neophasms of the breast or liver, Sezary syndrome and parthers, disease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 healing, maintain organs before transplantation, and support cell culture of primary tissues. AAU20342-AAU20666 represent human secreted protein amino acid sequences, and related sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Parkinson's disease and charcot-Marie-Tooth disease), cardio-/
cerebrovascular disorders (e.g. cardiac arrest, tachycardia,
angina and thrombosis), infections caused by bacteria, viruses and
fungi and ocular disorders (e.g. corneal infections). (I) and (II),
agonists, antagonists and antibodies can also be used to promote wound
                                                                                                                                                                                                                                                                              New nucleic acids and polypeptides, useful for diagnosing, preventing or treating medical conditions -
                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to novel isolated nucleic acid molecules (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1993.DAT:AAR42266

   The claim is for a peptide of a 45kD amino terminal tryptic fragment of glycocalicin selected from the sequence which inhibits binding of von Willebrand factor to platelet membrane glycoprotein ib and related molecules or other cells and cell matrices. Also claimed are a sequential subset of the above (Claim 2) and specific peptides (see FT) (Claim 3) with the same functions and any peptide of any sequential subset of amino acids of the sequence (Claim 4). The peptides and derivs. prevent platelet aggregation and inhibit thrombosis.
                                                                                                                                                                                                                                   Proteolytic 45 KD fragment of glycocalicin and derivs. - which inhibit binding of von Willebrand factor to platelet membrane glyco:protein, and

Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. IGF-beta, and hence for treating conditions associated with over-activity of the growth factor such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           leucine-rich repeat, proteoglycan; cell regulatory factor; MBP; fusion protein; maltose binding protein; tumour growth; inhibition; decorin; PG-II; PG-40; transforming growth factor-beta; TGF-beta.

Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such as certain tumours.
                                                                                                                     Active fragments of protein esp. decorin - with cell regulatory factor domain, useful for inhibiting cell regulatory factor activity

Human recombinant decorin (AAR89439) was obtd. by expression of a CDNA clone (AAT10741) in CHO host cells. Decorin (or PGII or PG-40) is a proteoglycan having a 40 kDa core protein. Recombinant decorin can be produced by cotransfection of CHO-DG44 cells with pSV2-decorin and pSV20hfr. Large-scale cultures can be performed using CHO cells attached to microcarrier beads. The recombinant protein is purified from the cells using a 3-step chromatographic procedure. It can be used for the highly sensitive detection of quantidinium ions (ppm range), partic. in protein-contg. solns. purified using GuHCl, and also has therapeutic applns.
                                                                                      Purificn. of human recombinant decorin – using a strong anion exchange resin, a hydrophobic interaction chromatography resin and a

hypothetical protein F2J10.8 [imported] - Arabidopsis thallana
Cyspecies: Arabidopsis thallana (mouse-ear cress)
Cyspecies: Arabidopsis thallana;
Cyspecies: Arabidopsis A.; Ecker, J.R.; Palm, C.J.; Federspiel, N.A.; Kaul, S.; White, O.; Alon
Chin, C.W.; Chung, M.K.; Conn, L.; Conway, A.B.; Conway, A.R.; Creasy, T.H.; Dewar,
Arauthors: Hunter, J.L.; Jenkins, J.; Johnson-Hopson, C.; Khan, S.; Khaykin, E.; Kim,
A.Authors: Hunter, J.L.; Jenkins, J.; Johnson-Hopson, C.; Khan, S.; Maiti, R.; Marzia
Rizzo, M.; Rooney, T.; Rowley, D.; Sakano, H.
A.Authors: Salzberg, S.L.; Schwartz, J.R.; Shinn, P.; Southwick, A.M.; Sun, H.; Tallo
ker, M.; Wu, D.; Yu, G.; Fraser, C.M.; Venter, J.C.; Davis, R.W.
A.Title: Sequence and analysis of chromosome 1 of the plant Arabidopsis.
A; Accession: H95536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Richardan, R.D.; Adams, M.D.; White, O.; Clayton, R.A.; Kirkness, E.F.; Kerlavage; Gocayne, J.D.; Scott, J.; Shirley, R.; Liu, L.I.; Glodek, A.; Kelley, J.M.; Weldman, D.M.; Brandon, R.C.; Fine, L.D.; Fritchman, J.L.; Fuhrmann, J.L.; Geoghagen, N.S.M. M.Alternate names: phosphoribosylpyrophosphate amidotransferase
C.Species: Lactococcus lactis
C.Species: La
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq_documentation_block:

cobyric acid synthase - Methanobacterium thermoautotrophicum (strain Delta H)

C.Species: Methanobacterium thermoautotrophicum

R.Smith, D.R.; Doucette-Stamm, L.A.; Deloughery, C.; Lee, H.; Dubois, J.; Aldredge, T.;

A.Smith, D.R.; Doucette-Stamm, L.A.; Wang, Y.; Wierzbowski, J.; Gloson, R.; Jiwani, N.

J. Bacteriol. 179, 7135-7155, 1997

J. Bacteriol. 179, 7135-7155, 1997

A.Stitle: Complete genome sequence of Methanobacterium thermoautotrophicum Delta H: funct

A.Accession: B69205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A;Residues: 1-514 <MTH>
